

BASIC FAILURE ANALYSIS

19 AUGUST, 2019
HOUSE OF ANGOSTURA, TRINIDAD

COURSE OVERVIEW

"Basic Failure Analysis (BFA) training is intended to provide facility personnel the requisite skills and knowledge to eliminate the problems and chronic failures that they are experiencing everyday on the job.

BFA is the "no frills", get down to business, problem solving tool for those closest to the real work.

While Root Cause Analysis (RCA) is an in depth approach to solving higher visibility failures BFA is about the failures-of-the-day that do not injure people, cause regulatory concern or cost a fortune.

BFA is designed specifically by field personnel, for the field. BFA can be thought of as a RCA Lite or 5-Whys Turbo. It is meant to adapt to these on-the-fly conditions and not to get stalled in paralysis-by-analysis!

OBJECTIVES

- Prioritize failures/problems, separate sporadic, unavoidable events from chronic ones.
- Identify and accumulate necessary failure/problem information using 5 P's technique.
- Formulate hypotheses using RCI's proven "Logic Tree" approach.
- Verify hypotheses
- Determine the root cause(s) and recommend corrective actions.
- Obtain rapid ROIs within the range of 600 - 1000% of every dollar invested.

DETAILS

- **USD 570 per person**
- **Registration Deadline: 28th June, 2019**
