

# LUBRICATION DEGRADATION MECHANISMS; A COMPLETE GUIDE

## TABLE OF CONTENTS

### Table of Contents

#### **1.1 What is a lubricant and what are its functions?**

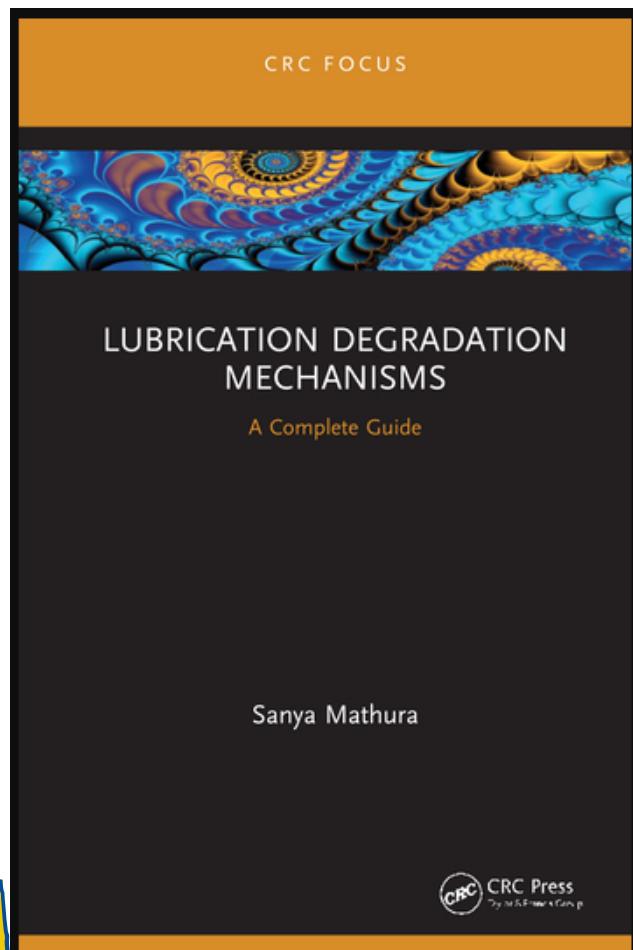

- 1.1.1 What is a lubricant?
- 1.1.2 What are the functions of a lubricant?
- 1.1.3 Understanding Lubrication Regimes

#### **2.1 Understanding the types of degradation mechanisms**

- 2.1.1 Oxidation
- 2.1.2 Thermal Degradation
- 2.1.3 Oxidation vs Thermal Degradation.
- 2.1.4 Microdieseling
- 2.1.5 Electrostatic Spark Discharge
- 2.1.6 Thermal Degradation vs Microdieseling vs Electrostatic Spark Discharge
- 2.1.7 Additive Depletion
- 2.1.8 Contamination

#### **3.1 Identification of lubricant degradation**

- 3.1.1 Basic Tests
  - 3.1.1.1 Viscosity ASTM D445
  - 3.1.1.2 Presence of Water / Fuel
    - 3.1.1.2.1 Water Ingress
    - 3.1.1.2.2 Fuel Ingress
  - 3.1.1.3 TAN / TBN
    - 3.1.1.3.1 TAN
    - 3.1.1.3.2 TBN
  - 3.1.1.4 Concentration of Additives
  - 3.1.1.5 Concentration of Metals
  - 3.1.1.6 Concentration of Contaminants

# LUBRICATION DEGRADATION MECHANISMS; A COMPLETE GUIDE

## TABLE OF CONTENTS

### 4.1 Tests to determine the types of Lubricant Degradation

#### 4.1.1 Oxidation

4.1.1.1 Acid Number – ASTM D974

4.1.1.2 Colour – ASTM D1500

4.1.1.3 FTIR

4.1.1.4 MPC (Membrane Patch Calorimetry) – ASTM D7843.

    4.1.1.4.1 Calorimetric Patch Analyzer (CPA)

4.1.1.5 RULER (Remaining Useful Life Evaluation Routine)

4.1.1.6 RPVOT (Rotating Pressure Vessel Oxidation Test) – ASTM D2272

#### 4.1.2 Thermal Degradation

4.1.2.1 Viscosity (ASTM D445)

4.1.2.2 FTIR

4.1.2.3 Colour (ASTM D1500)

#### 4.1.3 Microdieseling

4.1.3.1 Visual inspection of components

4.1.3.2 FTIR

4.1.3.3 QSA (Quantitative Spectrophotometric Analysis)

#### 4.1.4 Electrostatic Spark Discharge (ESD)

4.1.4.1 FTIR & QSA

4.1.4.2 RULER

4.1.4.3 Dissolved Gas Analysis (DGA) – ASTM D3612

4.1.4.4 Filter Inspection

#### 4.1.5 Additive Depletion

4.1.5.1 FTIR

4.1.5.2 Colour

4.1.5.3 QSA

4.1.5.4 RULER & RPVOT

#### 4.1.6 Contamination

4.1.6.1 FTIR

4.1.6.2 Colour

4.1.6.3 Presence of Water / Fuel / Coolant

#### 4.2.1 Summary of Degradation Mechanism Tests & Results

# LUBRICATION DEGRADATION MECHANISMS; A COMPLETE GUIDE

## TABLE OF CONTENTS

### **5.1 Dealing with Degradation**

- 5.1.1 Understanding your equipment
- 5.1.2 Determining the most applicable lab tests
  - 5.1.2.1 Understanding the results
- 5.1.3 Implementing measures based on lubricant degradation mechanism
  - 5.1.3.1 Oxidation
  - 5.1.3.2 Thermal Degradation
  - 5.1.3.3 Microdieseling
  - 5.1.3.4 Electrostatic Spark Discharge
  - 5.1.3.5 Additive Depletion
  - 5.1.3.6 Contamination

### **6.1 Summary**

### **7.1 Case studies**

- 7.1.1 Case Study 01: Extending the lubricant service life in Gas Turbines for Manufacturing Application
- 7.1.2 Case Study 02: Fuel ingress in Marine Application
- 7.1.3 Case Study 03: Water ingress in Gas Turbines for Manufacturing Application
- 7.1.4 Case Study 04: Rapidly increasing Oxidation in a Combined Cycle Power Plant
- 7.1.5 Case Study 05: Sporadic increases in Vibration and Temperature levels in an Ammonia compressor
- 7.1.6 Case Study 06: Lubrication Condition Monitoring Case Study Avoiding Critical Asset Damage
- 7.1.7 Case Study 07: Allison Transmission on School buses in Iowa
- 7.1.8 Case Study 08: Mobile Hydraulic Systems on Mobile Mix trucks in Texas
- 7.1.9 Case Study 09: Industrial Air Compressors in a Glass Manufacturing facility in Texas
- 7.1.10 Case Study 10: Industrial Hydraulic Systems in an Automotive Manufacturing facility in Indiana
